

15 January 2018

QUARTERLY ACTIVITIES REPORT FOR THE PERIOD ENDED 31 DECEMBER 2017

MT ALEXANDER PROJECT:

- Major diamond drill programme completed with laboratory assays confirming MAD71 as the best ever intersection at Mt Alexander
- Thick intersection of high grade nickel-copper-cobalt-PGE sulphides in MAD71 comprises:
 - 17.45m @ 3.01%Ni, 1.31%Cu, 0.13%Co and 1.68g/t Total PGEs from 37.45m including the massive sulphide zones of
 - 5.3m @ 4.39%Ni, 1.45%Cu, 0.21%Co and 2.09g/t Total PGEs from 39.3m and
 - 2.02m @ 5.05%Ni, 2.01%Cu, 0.21%Co and 3.31g/t Total PGEs from 50.6m and
 - 0.5m @ 3.68%Ni, 3.9%Cu, 0.17%Co and 2.68g/t Total PGEs from 54.4m
- Drilling at Mt Alexander scheduled to resume in early February 2018

CORPORATE:

- St George approved for participation in the Exploration Development Incentive (EDI) which will entitle eligible shareholders to receive tax credits from the Australian Taxation Office for the 2017/18 tax year
- St George funded to commence drilling in 2018

St George Mining Limited (ASX:SGQ) (“St George” or “the Company”) is pleased to present its Quarterly Activities Report for the quarterly period ended 31 December 2017.

MT ALEXANDER PROJECT – SIGNIFICANT EXPLORATION SUCCESS

A diamond drill programme was completed at the Mt Alexander Project during Q4 2017. A total of twenty (20) diamond drill holes were completed for 2,632.7 metres drilled.

A major exploration milestone was achieved at the Stricklands Prospect with drill hole MAD71 delivering a 17.45m thick intersection of high grade nickel-copper-cobalt-PGE sulphides. The mineralisation commenced from a shallow 37.45m downhole, contributing to the favourable project economics at Mt Alexander.

Another seven (7) drill holes completed at the Stricklands Prospect in Q4 2017 intersected massive nickel-copper sulphides. For further discussion of the drilling at the Stricklands Prospect, see our ASX Release dated 15 December 2017 ‘Assays Confirm Best Ever Intersection at Mt Alexander’ and our ASX Release dated 21 December 2017 ‘Drilling Continues to Extend Mineralisation at Mt Alexander’.

The thickness of the ultramafic and the nickel-copper sulphides intersected at Stricklands is supportive of further significant mineralisation being intersected at this prospect. Drilling at Stricklands is scheduled to resume in early February 2018.

Assays have also been received for five of the drill holes completed at the Cathedrals Prospect in Q4 2017, two of which intersected massive nickel-copper sulphides.

These two drill holes – MAD65 and MAD66 – successfully extended the known mineralisation at the Cathedrals Prospect, where the ultramafic and the footwall fault are interpreted from drill results to extend for a strike length of 400m.

For a further discussion of the drilling at the Cathedrals Prospect, please refer to our ASX Release dated 9 January 2018 ‘Assays Confirm Further High Grades at Mt Alexander’.

Ongoing drilling success at Mt Alexander continues to establish further re-current high grade mineralisation across a 4km strike of the Cathedrals Belt; see Figure 1.

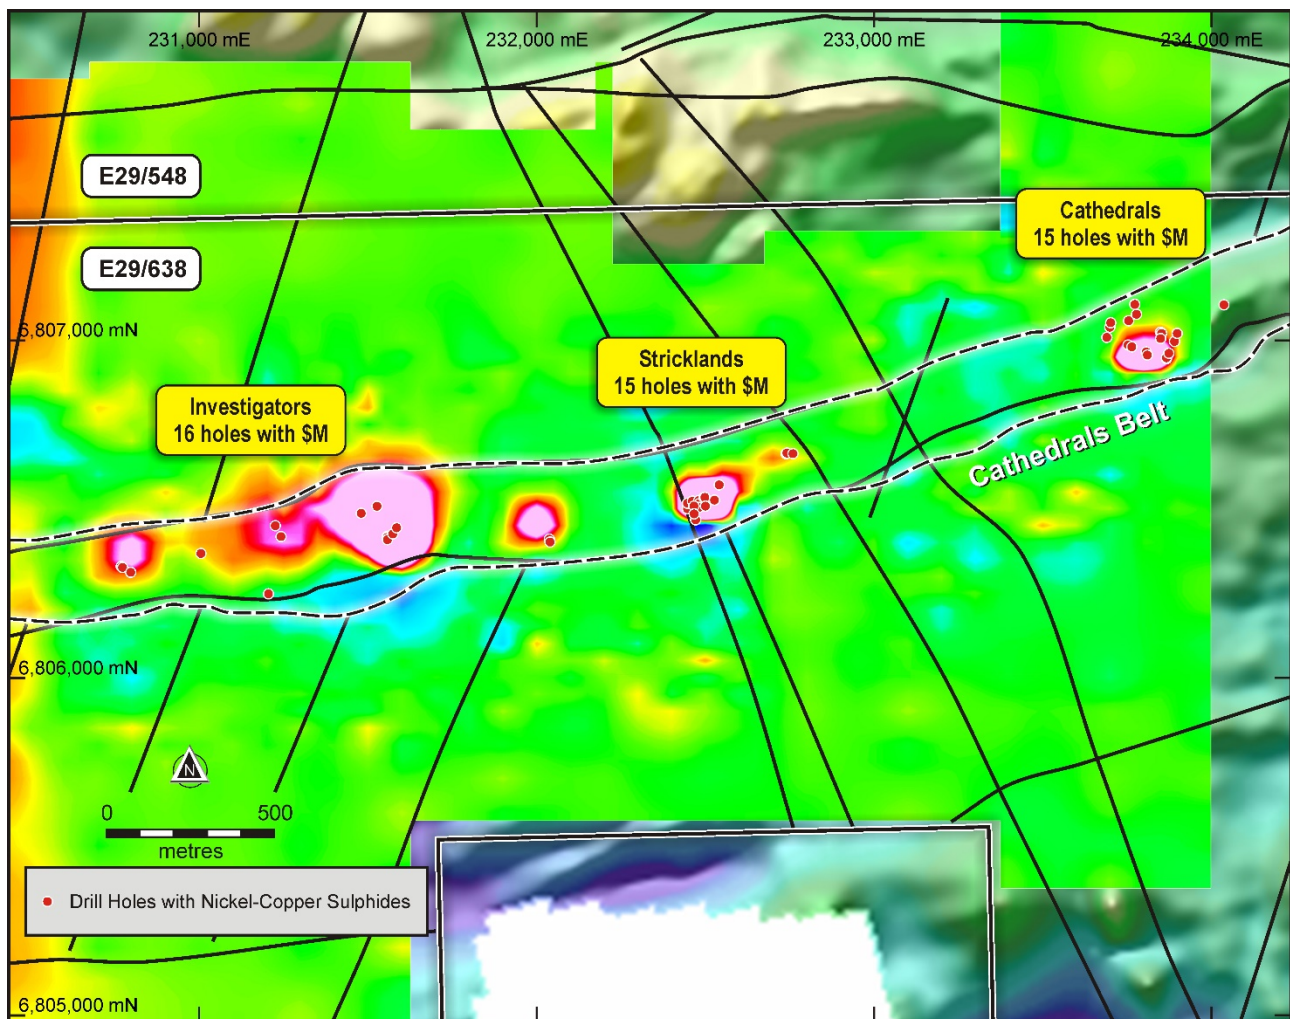

Figure 1 – plan view map of the Cathedrals Belt (over SAMSON FLEM Channel 18 (mid-time) image) showing the multiple intersections of massive nickel-copper-cobalt-PGE sulphides (“\$M”) within the large SAMSON EM anomalies at the Investigators, Stricklands and Cathedrals Prospects.

About the Mt Alexander Project:

The Mt Alexander Project is located 120km south-southwest of the Agnew-Wiluna belt which hosts numerous world class nickel deposits. The Project comprises four granted exploration licences – E29/638, E29/548, E29/962 and E29/954.

The Cathedrals, Stricklands and Investigators nickel-copper-cobalt-PGE discoveries are located on E29/638, which is held in joint venture by Western Areas Limited (25%) and St George (75%). St George is the Manager of the Project with Western Areas retaining a 25% non-contributing interest in the Project (in regard to E29/638 only) until there is a decision to mine.

Hole ID	Prospect	MGA East	MGA North	Dip	Azimuth	Depth
MAD65	Cathedrals	233817.5	6806949	-75	180	95

Table 3 – Significant intersections for MAD65 and MAD66 at the Cathedrals Prospect. Assays have also been received for MAD67, MAD68 and MAD69 at Cathedrals Prospect with no significant intersections of mineralisation.

Except as detailed above, assays for the drilling completed in Q4 2017 are pending.

EAST LAVERTON PROJECT – NICKEL SULPHIDE DRILLING CONTINUES

A diamond drill programme commenced in Q4 2017 at the Windsor nickel sulphide prospect at St George’s 100% owned East Laverton Project. The primary purpose of the programme was to test three (3) strong EM conductors identified by the high powered SAMSON EM survey completed at Windsor in October 2017.

Details of the four planned drill holes are shown in Table 4. All drill holes were completed except for WINDD012 which was suspended 40.1m downhole due to service requirements for the drill rig. Drilling is scheduled to resume in early February 2018.

WINDD012 is testing the Windsor X3 target, which is a large, late-time EM conductor that has been modelled by Newexco as an EM plate of 320m x 200m with conductivity of 5,000 Siemens. The EM plate is favourably located on the edge of a strong magnetic feature, which may represent prospective ultramafics.

For further discussion of the drilling at Windsor, please see our ASX Release dated 11 December 2017 ‘Drilling of EM Conductors at Windsor - Update’.

Figure 2 – map of the Windsor prospect (against RTP tilt mag data) showing the favourable location of the three EM conductors on the edge of magnetic features. Planned drill holes are depicted by red dots.

Hole ID	GDA94_51 East	GDA94_51 North	Dip	Azi	Hole Depth (m)	Target Depth (m)	Target

Table 4 – details for the drill holes at the Windsor nickel sulphide prospect planned for Q4 2017.

TENEMENT INFORMATION

There were no changes to the Company's tenement holdings during the quarter except as outlined below.

East Laverton Project

St George Mining has 100% ownership of 31 granted Exploration Licences at the East Laverton Project. Six Exploration Licences were granted on 7 December 2017.

Mt Alexander Project

At the end of Q4 2017, St George had 100% ownership of three granted Exploration Licences (E29/548, E29/962 and E29/954) and one application for Exploration Licence (E29/972) at Mt Alexander. On 4 January 2018, E29/972 was granted to St George.

A further granted Exploration Licence, E29/638, is held in joint venture between Western Areas (25%) and St George (75%).

Hawaii Project

St George has 100% ownership of one granted Exploration Licence at the Hawaii Project.

CORPORATE UPDATE

Exploration Development Incentive (EDI) Tax Credits

The Australian Taxation Office has confirmed St George's participation in the EDI for the 2017/2018 tax year. Under the EDI scheme, St George can distribute tax credits to its eligible shareholders.

The EDI scheme is available to Australian junior exploration companies like St George that are undertaking greenfields exploration and that do not derive any taxable income.

Further details of the record date for determining eligibility for the EDI tax credits will be announced shortly.

COMPETENT PERSON STATEMENT:

The information in this report that relates to Exploration Targets, Exploration Results, Mineral Resources or Ore Reserves regarding the East Laverton Project is based on information compiled by Mr Tim Hronsky, a Competent Person who is a Member of The Australasian Institute of Mining and Metallurgy. Mr Tim Hronsky is employed by Essential Risk Solutions Ltd which has been retained by St George Mining Limited to provide technical advice on mineral projects.

The information in this report that related to Exploration Targets, Exploration Results, Minerals Resources or Ore Reserves regarding the Mt Alexander Project is based on information complied by Mr Matthew McCarthy, a Competent Person who is a Member of The Australian Institute of Geoscientists. Mr McCarthy is employed by St George Mining Limited.

This ASX announcement contains information extracted from the following reports which are available on the Company's website at www.stgm.com.au:

- 5 July 2017 *High Grade Nickel-Copper-Cobalt-PGEs at Investigators*
- 6 July 2017 *Nickel Sulphide Exploration at Windsor is Escalated*
- 19 July 2017 *High Grade Nickel-Copper-Cobalt-PGEs at Investigators*
- 12 September 2017 *Mt Alexander – Exploration Update*
- 20 September 2017 *Nickel Sulphide Exploration at Windsor*
- 26 October 2017 *Drilling Commences at Mt Alexander*
- 30 October 2017 *New EM Conductors at Windsor Nickel Sulphide Prospect*
- 13 November 2017 *Further High Grade Mineralisation at Mt Alexander*
- 20 November 2017 *Outstanding Intersection of Nickel-Copper Sulphides*
- 30 November 2017 *Drilling at Mt Alexander – Update*
- 7 December 2017 *Further Nickel-Copper Sulphides Intersected at Mt Alexander*
- 11 December 2017 *Drilling of EM Conductors at Windsor – Update*
- 15 December 2017 *Assays Confirm Best Ever Intersection at Mt Alexander*
- 21 December 2017 *Drilling Continues to Extend Mineralisation at Mt Alexander*
- 9 January 2018 *Assays Confirm Further High Grades at Mt Alexander*

The Company confirms that it is not aware of any new information or data that materially affects the exploration results included in any original market announcements referred to in this report and that no material change in the results has occurred. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.

TENEMENT INFORMATION AS REQUIRED BY LISTING RULE 5.3.3

Other than as detailed in the body of the Quarterly Activities Report and in the Table below, no tenements, in part or whole, were relinquished, surrendered or otherwise divested during the quarterly period ended 31 December 2017.
